

A REAL IRON MAN™ WORKBENCH

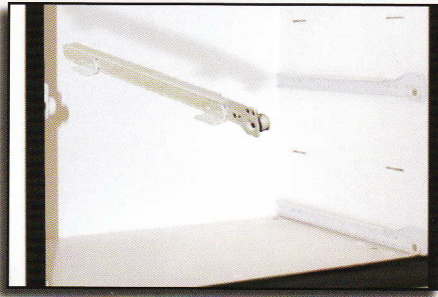

The work benches feature our heavy duty floor standing foundation as well as a ruggedly constructed top frame. The bench tops are high pressure laminated with Formica and feature a heavy duty reinforced trim.

While the bench is beautiful to look at, it is also quite capable of holding hundreds of pounds.

Many competitors cut costs on workbenches by using cabinets designed as wall units, and covering them with a light duty work surface.

Quick-mount drawer and pull-out tray system

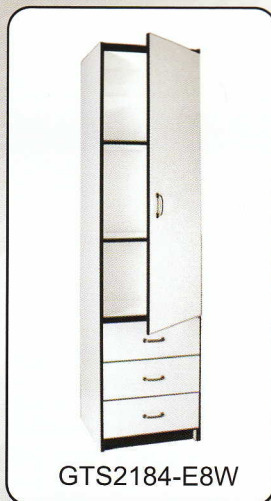

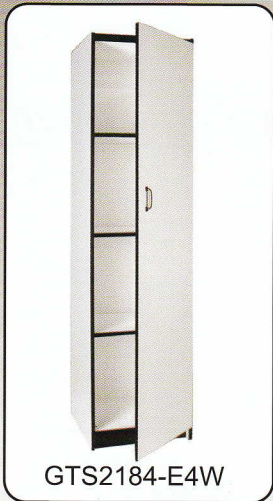

Iron Man™ cabinets are engineered to be highly modular and easily re-configured at any time.

For example, options such as drawers and pull out trays come with all the hardware necessary for installation by the homeowner. In this photo, you can see that drawer slides slip easily into the same slots used by the shelf hangers.

This allows drawers and pull out trays to be installed in seconds, and without the use of tools

Iron Man™

Sample Configurations

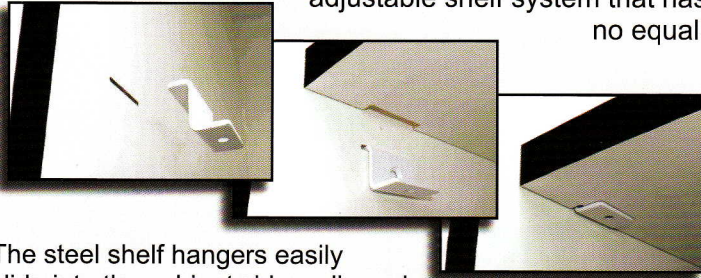

All cabinets must be secured to the wall.

Know The Difference-- Before You Buy!

EXCLUSIVE SHELF HANGER SYSTEM

Iron Man™ cabinets feature an exclusive patent pending adjustable shelf system that has no equal!

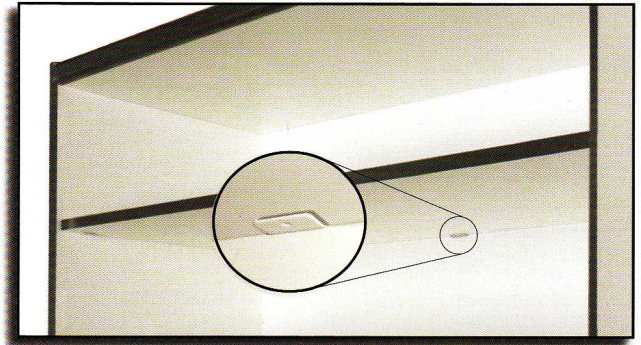

The steel shelf hangers easily slide into the cabinet side walls and the shelves themselves are easily fitted over the hangers. Once installed, the shelves cannot slide forward off the hangers, and the hangers cannot fall out or tear out. Our adjustable shelf system has been tested to 560 lbs.

Push pin shelf hangers were never designed for heavy duty applications. For this reason, you will not find them in our cabinets.

WITH CENTER SUPPORTED SHELVING

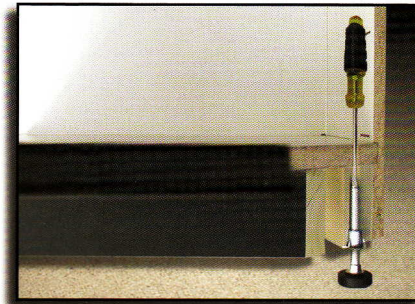

To eliminate shelf sag, all wide-span adjustable shelves are center supported by our patented hangers. This is made possible by our 1/2" thick back panels and a hanger that cannot fall out.

HARDWOOD FOUNDATION with INTEGRATED STEEL LEG LEVELERS

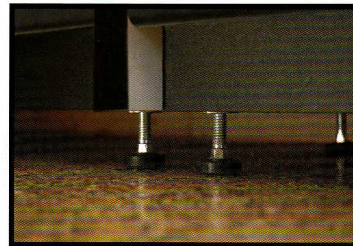

Most garage cabinets are essentially a simple box design, mounted to the wall. The wall to which the box is mounted must provide both the rigidity for the cabinet, as well as sustaining the full weight of the cabinet and its contents.

By contrast, Iron Man™ floor standing cabinets are built upon a rigid hardwood foundation. This foundation gives our cabinets the strength to stand alone, while also providing an attractive recessed toe kick.

All four leg levelers are completely adjustable from inside the cabinets.

The leveler shank is 1/2" x 3" diameter solid steel and the entire system is integrated into the hardwood components of the foundation assembly.

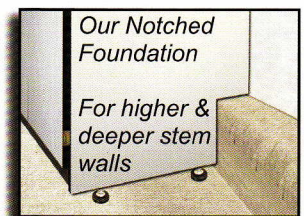

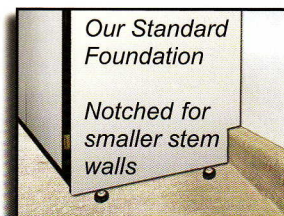

The load capacity of this system is beyond compare.

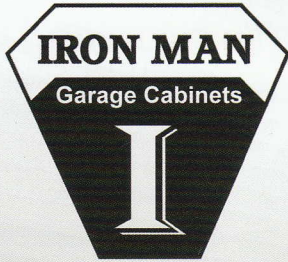

CABINETS DESIGNED FOR THE WAY GARAGES ARE BUILT

While most competitors continue to base their cabinet size upon common 4'x8' sheet wood, we believe that the size of the cabinet should be based upon customer benefit. It is true that many people want to use their garage for storage, but there are a large number of people who would also like to park their cars in the garage. Our cabinet is designed to provide usable (as in reachable) space, while still allowing enough room to get in and out of today's larger cars, including SUVs.

In addition, most garages have stem walls that can prevent other cabinets from sitting on the floor, where they belong. Rather, they raise the cabinets off the floor and screw them to the wall. By contrast, a standard floor-standing Iron Man™ cabinet can be mounted over a stem wall as high as 5" and as deep as 2 1/2".

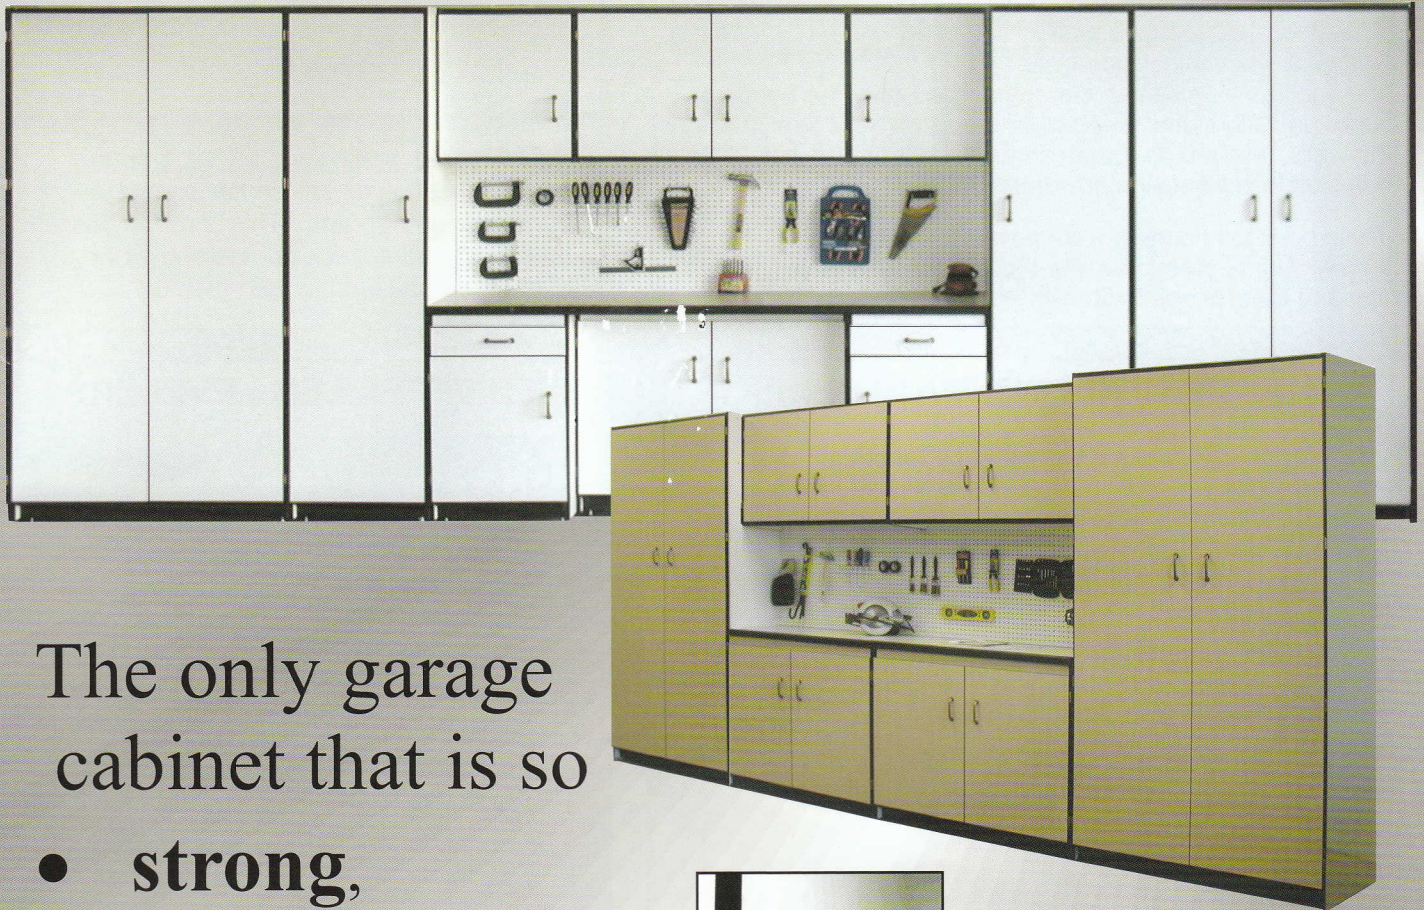

Further more, by fitting any Iron Man™ cabinet with our notched foundation, it can be mounted over stem walls as high as 16" and as deep as 5"

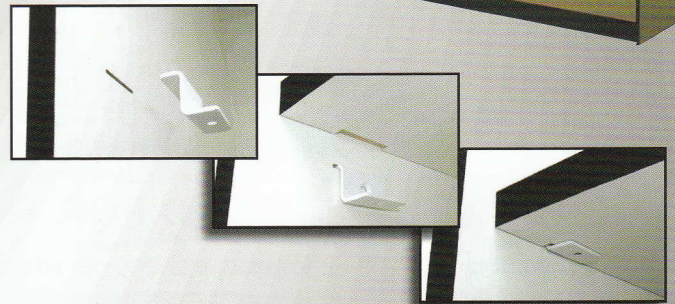

IRON MAN™

The Ultimate Garage Cabinet

The only garage cabinet that is so

- strong,
- well built,
- versatile, &
- attractive,

It Adds Storage and Organization to Your Garage,
and

Real Value To Your Home!
